DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of the species of SEQ ID NO: 7 in Paper No. 11 (11 June 2002) is acknowledged. Upon further consideration, it is deemed that a search and examination of all sequences that are directed to a fragment of the human ART protein of amino acids 76-132 would not be an undue burden. Therefore, the following SEQ ID NOS: are being examined: SEQ ID NOS: 1-3, 6-8, 15 and 16. All of the claims read on these sequences.

Status of Application, Amendments And/Or Claims

The sequence listing submitted 05 April 2002 (Paper No. 8) was found to be free of errors and has been entered into the file.

The drawings have been approved by the examiner and the draftsman.

Priority

Applicant has not complied with one or more conditions for receiving the benefit of an earlier filing date under 35 U.S.C. 371 and 119(e) as follows:

An application in which the benefits of an earlier application are desired must contain a specific reference to the prior application(s) in the first sentence of the specification or in an application data sheet (37 CFR 1.78(a)(2) and (a)(5)).

Claim Objections

Claims 1, 2 and 4-16 are objected to because of the following informalities: the claims embrace on-elected inventions. Appropriate correction is required.

Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

No claims are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

WO97/43412. 20 Nov. 1997. Amgen Inc.

US 5766877 (STARK ET AL). Issued 16 Jun. 1998, filed 27 Nov. 1996.

US 6060589 (STARK ET AL). Issued 09 May 2000, filed 02 Mar. 1998.

US 6203995 B1 (STARK). Issued 20 Mar. 2001, filed 29 Jun. 1999.

Each of the four references disclose a C-terminal fragment of human ART from residue 79 to 132 (see SEQ ID NO: 8). The references' fragment has biological activity, in that it decreases the appetite of rats to which the peptide is fed. The instant invention's SEQ ID NOS: 1-3, 6-8, 15 and 16 all contain a C-terminal fragment of human ART from residue 76-132, and is shown to bind melanocortin receptors. The

physiological effects of ART on appetite are thought to be mediated through the binding of ART to melanocortin receptors. Therefore, the references' peptide differs from the C-terminal fragment of human ART of SEQ ID NOS: 1-3, 6-8, 15 and 16 of the instant invention solely in that three amino acid residues are deleted at the N-terminus of the references' sequence relative to the instant invention's sequences. However, none of the prior art suggests the specific C-terminal fragment recited in the claims, which is amino acids 76-132 of human ART.

Given the minor nature of the remaining issues, Applicant is encouraged to contact the examiner upon review of the office action and the application in order to negotiate an allowance via examiner's amendment. Applicant is also encouraged to review whether or not an information disclosure statement will be filed.
